PREFACE

The QUARTERLY CUMULATIVE INDEX MEDICUS is published four times each year, each temporary number covering periodicals received during a three months period, each permanent number the periodicals received during a half year. Issues are published as soon as possible after the completion of the period they cover. The dates of issue are approximately May, August, November and February. The August and February numbers are bound in cloth for permanent preservation.

On pages 40-56 will be found a list of the journals indexed.

The main index is preceded by a list of new books, alphabetized as to authors, followed by a subject classification of the same material.

INSTRUCTIONS FOR USE OF QUARTERLY CUMULATIVE INDEX MEDICUS

This periodical indexes itself alphabetically, both as to author and subject entries.

THE COMPLETE BIBLIOGRAPHIC REFERENCE IS TO BE FOUND AFTER AUTHOR'S NAME ONLY. THE TITLES UNDER SUBJECT ENTRIES ARE OFTEN INVERTED; SOMETIMES THEY ARE EXPANDED OR SHORTENED.

Following is a typical citation for an author entry covering an original contribution:

PIÉDELIÈVRE, R., and MARTIN, P. E., Projectiles migrateurs (conditions de pénétration des balles dans les vaisseaux), Presse méd. **41**: 1681-1683, Nov. 1, '33

The citation gives the name of the authors, the title of the article in the original language if English, French, German, Spanish, Italian or Portuguese, or in translation if in other languages. Then follow the abbreviation of the title of the periodical, the volume in black-face type, paging, month (day of month if a semimonthly, semiweekly or weekly publication) and year, in order named, e. g., Presse méd. **41**:1681-1683, Nov. 1, '33.

When there are two or more authors for an article the complete entry as shown appears only under the name of the first author. Under the name of each of the joint authors a cross reference is made to the original author entry, thus:

MARTIN, P. E.: See PIÉDELIÈVRE, R., jt. auth.

Russian names appear with various spellings in medical literature; for instance, the name Chernikov, V. V., may appear as Tschernikov, W. W., Tschernikoff, W. W., or Tchernikow, W. W. In this index the spelling followed in Russian publications will be maintained, and a cross reference to the original will be made from unusual variations.

A subject entry is prepared by translation of the title if in a foreign language and by shortening to emphasize the significant portions. The author entry cited appears as follows in the subject entry:

BLOOD VESSELS
foreign bodies, migrating projectiles; penetration of bullets into blood vessels, [R. Piédelièvre & P. E. Martin] Presse méd. **41**: 1681-1683, Nov. 1, '33

In this index, original articles, biographic material and other medical literature of importance are indexed in one alphabet. In searching for a specific article, the author entry should be consulted if the name of the author is known, since the complete bibliographic reference is to be found after the author's name only. In the subject entry of a foreign title a brief English abstract title, indicating the actual content of the article, is substituted for the author's title, when obscure, ill considered or misleading. In unsigned articles, the complete title in the original language as well as a translation will be found under the subject entry. If the subject only is known, the articles should be sought first under the specific word in the title that defines the subject, e. g., **ANEMIA; ENDOMETRIUM; HEMIPLEGIA;** etc.

Prefixes to chemical compounds denoting numbers of atoms or radicals, or their positions, such as mono, di, tri, ortho, meta and para, are alphabetized under the essential constituents, the prefixes being ignored as far as alphabetical arrangement is concerned. For instance, tri-Brom-Ethanol appears in the Index under "B" as *tri***BROM-ETHANOL,** and diOxyphenylalanine under "O" as *di***OXYPHENYLALANINE.** Likewise, figures representing the position of radicals or side chains are also ignored in the alphabetical classification. Exceptions to this rule include trade names and names of official drugs as, **ACID, trichloracetic; TRINITROPHENOL.**

Articles with titles equivalent to the capitalized heading appear immediately beneath the subject entry with the name of the author only. Unclassified titles then follow in alphabetical order according to title. Subclassifications then follow, of which the arrangement is approximately:

FOR DISEASES

acute	experimental	mortality
blood in	heredity	pathology
complications and sequels	history	prevention
diagnosis	immunity	prognosis
epidemiology and statistics	in infants and children	therapy
etiology and pathogenesis	metabolism in	transmission

FOR ORGANS

abnormalities	examination	pathology
abscess	excision	physiology
anatomy and histology	foreign bodies	roentgenography
calculi	function tests	rupture
cancer	hemorrhage	surgery
cysts	hernia	syphilis
diseases	hypertrophy	tuberculosis
diverticula	infarction	tumors
embryology	innervation	wounds and injuries

Literature referable to organs and regions of the body is classified under the particular organ or region, e. g., **BRAIN, abscess; STOMACH, cancer; FEMUR, fractures.**

Articles on the action of a drug in general or the method of administering it are indexed under the name of the drug; but articles on the action of a drug in a particular disease are indexed under the disease; e. g., an article on "The Action of Tryparsamide" is indexed under Tryparsamide, while an article on "Tryparsamide in General Paralysis" is indexed under **PARALYSIS, GENERAL, therapy.**

Biographies and obituaries appear under the heading **"BIOGRAPHIES"** and **"OBITUARIES,"** with cross references from individual names.

Numerous cross references are supplied from specific names of organs, from diseases, from eponyms, etc.

While the general scheme of indexing in this publication classifies the literature according to a specific arrangement, some subjects are, of necessity, grouped under broad, general headings. A representative list follows:

Acids
Anesthesia
Apparatus
Arteries
Bacteria
Contracture
Enzymes
Fistula
Hospitals
Instruments
Jurisprudence, Medical
Medicine
Muscles
Nerves
Paralysis
Reflex
Sarcoma
Tumors
Vital Statistics
Workmen's Compensation and Insurance
